

Where answers come first

Help authors get it right first time. Pre-submission clears up the questions that usually come up after upload, so fewer manuscripts stall once they're in review.

Focus editorial time where it counts

More manuscripts arrive already matched to your journals and ready for review.

Guide authors to better decisions

Authors check scope, APC coverage, and manuscript readiness before they commit.

Keep messages consistent everywhere

Bring journal details, agreement coverage, and author guidance into one branded experience.

Why pre-submission impacts everything that follows

Authors choosing where to submit want to know three things:

1. In this journal the right fit?
2. Is my manuscript ready?
3. What's it going to cost me?

Too often, those questions are answered by a rejection. Out of scope. Not covered by an agreement. Not ready for review. By then, the author has put in the work to submit, and your editors have put in the work to assess it.

ChronosHub gives authors the answers before they submit, when they matter most, through our own product and integrations with your preferred third-party tools.

Key features

- ✓ **Sleek, branded catalogue**
Your entire portfolio, searchable and filterable by field, OA type, impact factor, etc. Side-by-side journal comparison included.
- ✓ **Flexible manuscript checks**
Add the tools you choose, from scope to technical checks, at the point where authors can use them to make submissions stronger.
- ✓ **Public homepage**
A branded pre-login homepage puts guidelines, resources, and company news in one place, in your control.
- ✓ **Cost and coverage confirmed**
At venue selection, authors see whether they're covered by an institutional agreement and what funding or discounts apply.

Integrations are where the future of publishing is. ChronosHub has allowed us to be really clear about how we communicate and how we're integrating people into the workflow.

—David Haber, Publishing Operations Director, American Society for Microbiology
